Understand the trigger.
Verify the evidence.

Verifiable rainfall evidence on Solana.

Historical replay · canonical receipts · test-only commitments

> Crypto World’s Fair 2026

THE TRUST BOUNDARY

A deterministic contract still trusts its inputs.

Which weather?

Provider, model and grid point—not a claim about rainfall at an individual farm.

Which calculation?

Complete UTC days, exclusive end date, integer units and inclusive thresholds.

Which result?

A replayable hypothetical outcome—not evidence of coverage or a token transfer.

THE PRODUCT

Replay. Inspect. Export. Verify.

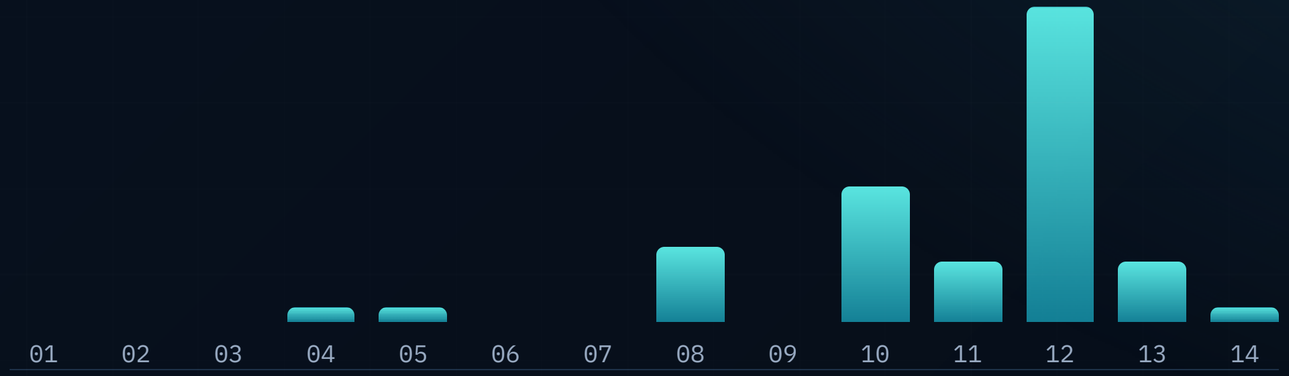

Completed archive → Validated days → Fixed-point replay → Canonical receipt

No wallet required to inspect or independently verify a receipt.

A missing reading fails closed; it does not become a drought.

A REAL CAPTURED EXAMPLE

Fourteen days.
4.60 millimetres.

Nairobi · ERA5 · September 1–15, 2026 · end exclusive

≤ 80 mm

Inclusive drought trigger met

500 test USDC

Hypothetical arithmetic only.
No policy purchase or payout.

WHY SOLANA

Commit the digest. Not weather truth.

Native foundation

The inherited protocol uses Anchor and SPL tokens; no gratuitous multichain rewrite.

Signer-bound Memo

The browser checks devnet genesis before sending. A real local-validator Memo was confirmed and read back.

Clear boundary

A digest commitment establishes integrity and timing—not an authenticated oracle, purchase or payout.

COMPETITIVE REALITY

Not the first insurance.
A clearer evidence layer.

Arbol & Etherisc

Existing weather and blockchain crop-protection precedents. No firstness claim.

Initial hypothesis

Climate-risk protocol builders and cooperative/distributor design partners who need inspectable terms.

Possible business

An evidence integration service for licensed carriers—not an unlicensed direct insurance offer. No traction claimed.

DISCLOSED WORK & NEXT GATE

A working prototype. An honest next step.

New event work

Evidence Lab, historical ingestion, canonical verifier, Memo path and capital-accounting regressions.

Prior work disclosed

Existing May 2026 Anchor/UI prototype and earlier drafts. Only event-period changes are presented as new.

Before real coverage

Complete program deployment/integration, audit, oracle and pricing controls, legal review and underwriting capacity.

This product presentation uses no founder identity or eligibility attestations. It does not replace a required personal founder video.
